Defn

With all of the tweets circulating every second it is hard to tell whether the sentiment behind a specific tweet will impact a company, or a person’s, brand for being viral (positive), or devastate profit because it strikes a negative tone.

- What’s the **Sentiment** of this tweet.
- What’s the part of the tweet (**word or phrase**) that reflects the sentiment.

ID	text	selected_text	sentiment
<i>cb774db0d1</i>	Uh oh, I am sunburned	I am sunburned	negative
<i>549e992a42</i>	We saw that the baddie’s the best	best	positive
<i>f84b89a828</i>	Sounds like me	Sounds like me	neutral

[Conclusion](#)

Data Visualization

Data Visualization

- Problem Definition
- Data Visualization
- Data Visualization**
- GOAM Algorithm
- Evaluation Results
- Conclusion

- First, check the data. The training set contains 27482 data.
 - ◆ Take a look at the proportion of different types of text in the training set
 - ◆ It can be seen that the number of three kinds of data is relatively average. In addition, there are more neutral texts.

Data Visualization

- [Problem Definition](#)
- [Data Visualization](#)
- [Data Visualization](#)
- [GOAM Algorithm](#)
- [Evaluation Results](#)
- [Conclusion](#)

- Let’s take a look at the proportion of each category of text in another visualization method.
- ◆ Most of them are neutral emotions,has 40.5 present.Positive are 31.2 persent.Negetive are 28.3 persent.

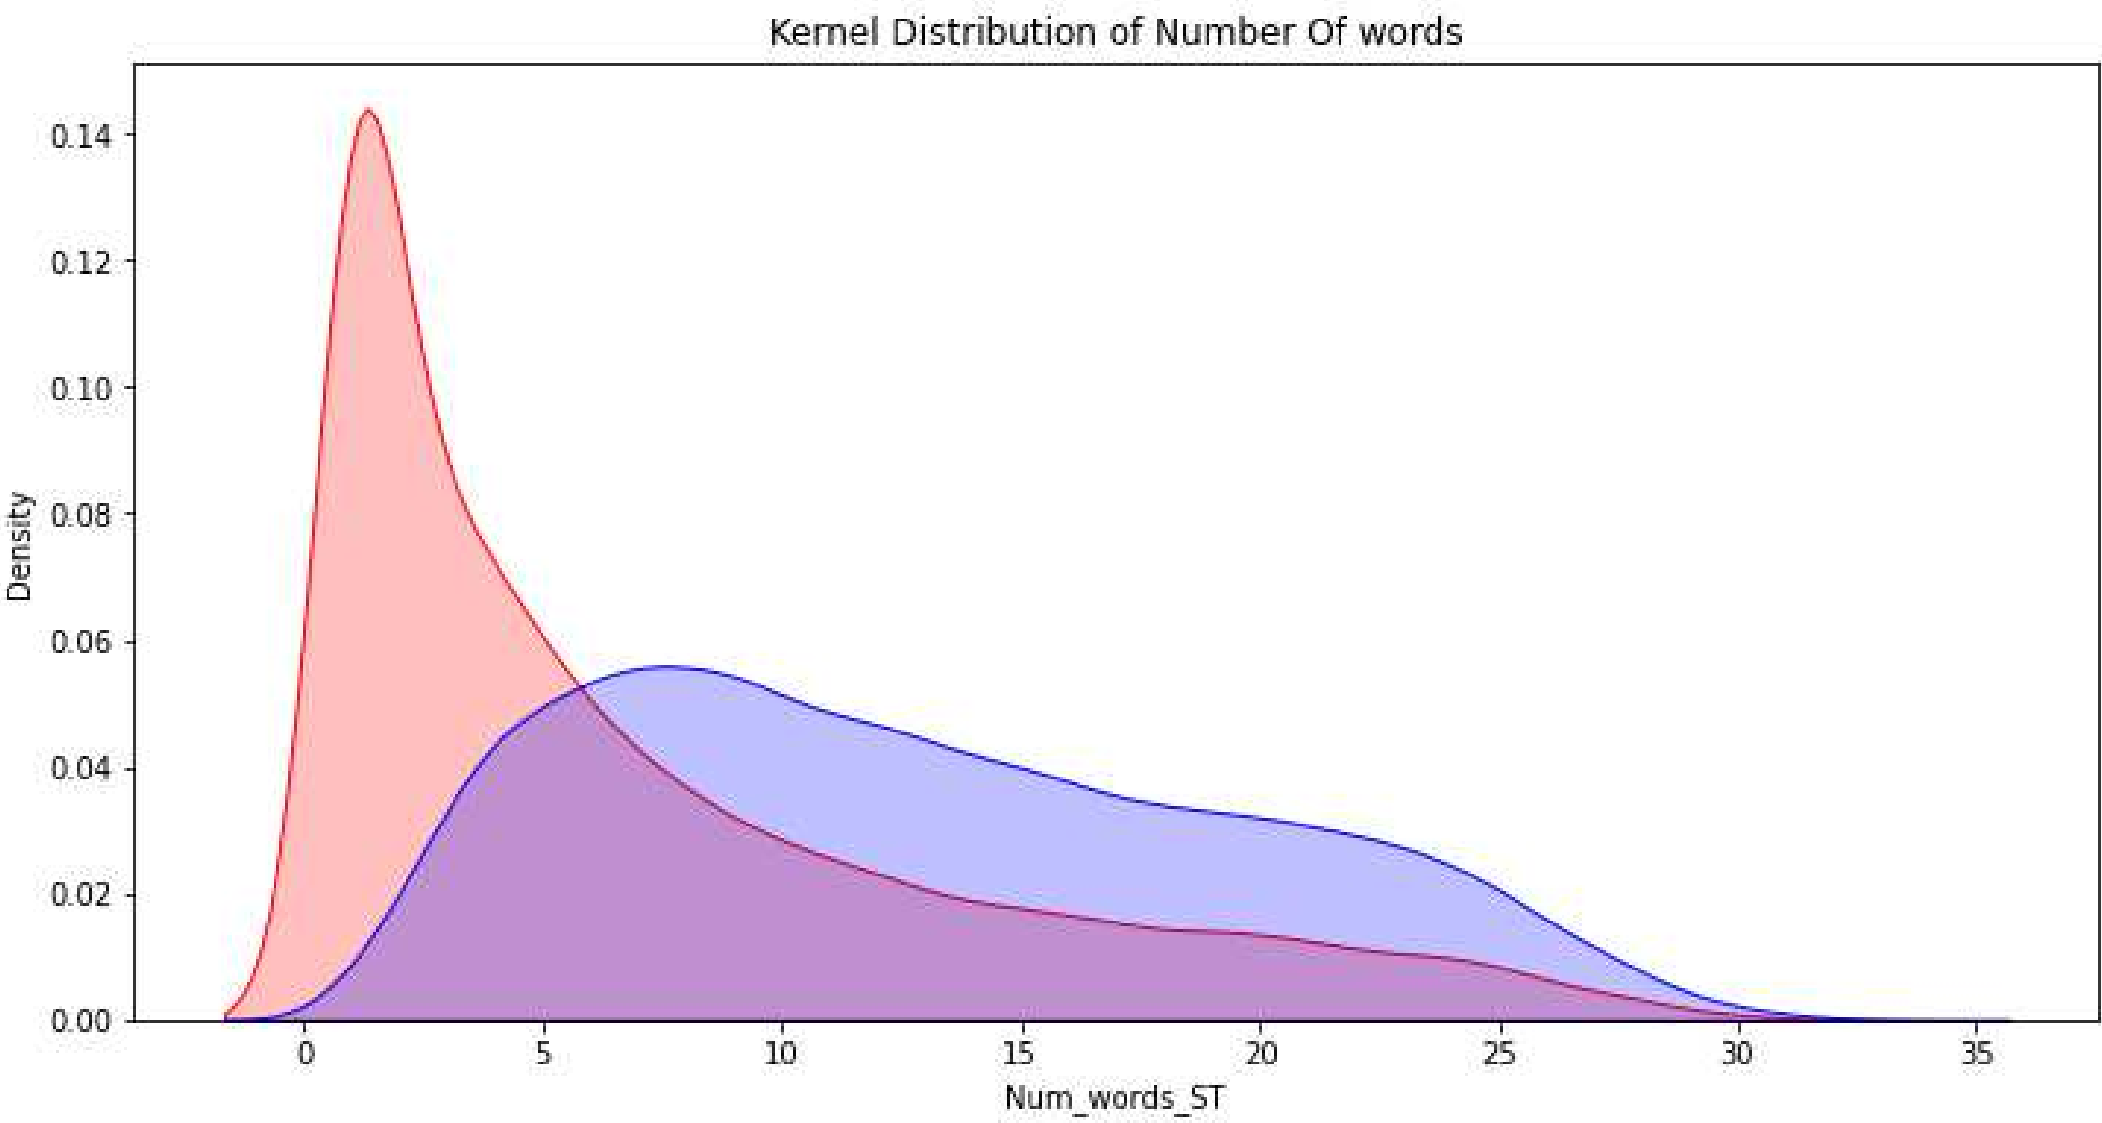

Data Visualization

- [Problem Definition](#)
- [Data Visualization](#)
- [Data Visualization](#)
- [GOAM Algorithm](#)
- [Evaluation Results](#)
- [Conclusion](#)

- Count the distribution interval of the length of the given text and the selected text.

Data Visualization

- Problem Definition
- Data Visualization
- Data Visualization**
- GOAM Algorithm
- Evaluation Results
- Conclusion

- Statistics of positive emotions were selected in the text of the highest frequency of the first few words.

- The statistical results will be generated word cloud to more intuitive look at the frequency of words.

WordCloud of Postive Tweets

- Problem Definition
- Data Visualization
- Data Visualization**
- GOAM Algorithm
- Evaluation Results
- Conclusion

- Statistics of neutral emotions were selected in the text of the highest frequency of the first few words.

- Problem Definition
- Data Visualization
- Data Visualization**
- GOAM Algorithm
- Evaluation Results
- Conclusion

- The statistical results will be generated word cloud to more intuitive look at the frequency of words.

WordCloud of Neutral Tweets

- Problem Definition
- Data Visualization
- Data Visualization**
- GOAM Algorithm
- Evaluation Results
- Conclusion

- Statistics of negative emotions were selected in the text of the highest frequency of the first few words.

- Problem Definition
- Data Visualization
- Data Visualization**
- GOAM Algorithm
- Evaluation Results
- Conclusion

- The statistical results will be generated word cloud to more intuitive look at the frequency of words.

WordCloud of negative Tweets

Data Visualization

Framework of GOAM algorithm:

Figure 1: Framework of GOAM Algorithm

Step One - Group Feature Extraction

- Problem Definition
- Data Visualization
- GOAM Algorithm
- Step One - Group Feature Extraction
- Step Two - Outlying Degree Scoring
- Step Three - Outlying Aspects Identification
- Evaluation Results
- Conclusion

■ Suppose f_1, f_2, f_3 are three features of G_q .

$$f_1: \{x_1, x_2, x_3, x_4, x_5, x_2, x_3, x_4, x_1, x_2\}$$

$$f_2: \{y_2, y_2, y_1, y_2, y_3, y_3, y_5, y_4, y_4, y_2\}$$

$$f_3: \{z_1, z_4, z_2, z_4, z_5, z_3, z_1, z_2, z_4, z_2\}$$

Figure 2: Histogram of G_q on three features

Step Two - Outlying Degree Scoring

Problem Definition

Data Visualization

GOAM Algorithm

Step One - Group Feature Extraction

Step Two - Outlying Degree Scoring

Step Three - Outlying Aspects

Identification

Evaluation Results

Conclusion

- Calculate Earth Mover Distance
 - ◆ Represent one feature among different groups
 - ◆ Purpose: calculate the minimum mean distance

Figure 3: EMD of one feature

TULIP

Team for Universal Learning and Intelligent Processing

Step Two - Outlying Degree Scoring

Problem Definition
Data Visualization
GOAM Algorithm
Step One - Group Feature Extraction
Step Two - Outlying Degree Scoring
Step Three - Outlying Aspects Identification
Evaluation Results
Conclusion

■ Calculate the outlying degree

$$OD(G_q) = \sum_1^n EDM(h_{q_s}, h_{k_s})$$

- ◆ $n \Leftrightarrow$ the number of contrast groups.
- ◆ $h_{k_s} \Leftrightarrow$ the histogram representation of G_k in the subspace s .

Step Three - Outlying Aspects Identification

- [Problem Definition](#)
- [Data Visualization](#)
- [GOAM Algorithm](#)
- [Step One - Group Feature Extraction](#)
- [Step Two - Outlying Degree Scoring](#)
- [Step Three - Outlying Aspects Identification](#)
- [Evaluation Results](#)
- [Conclusion](#)

- Identify group outlying aspects mining based on the value of outlying degree.
- The greater the outlying degree is, the more likely it is group outlying aspect.

 - Step Two - Outlying Degree Scoring
 - Step Three - Outlying Aspects Identification
- Evaluation Results
- Conclusion

Table 2: outlying degree of each possible subspaces

Feature	Outlying Degree	Feature	Outlying Degree
$\{F_1\}$	4.351	$\{F_2, F_3\}$	4.023
$\{F_2\}$	2.012	$\{F_3, F_4\}$	4.324
$\{F_3\}$	1.392	$\{F_2, F_4\}$	2.018
$\{F_4\}$	2.207	$\{F_2, F_3, F_4\}$	2.012

■ Search process:

$OD(\{F_1\}) > \alpha$, save to T_1 .
 $OD(\{F_2\}) < \alpha$, save to C_1 .
 $OD(\{F_3\}) < \alpha$, save to C_2 .
 $OD(\{F_4\}) < \alpha$, save to C_3 .

$OD(\{F_2, F_3\}) > \alpha$, save to N_1 .
 $OD(\{F_3, F_4\}) > \alpha$, save to N_2 .
 $OD(\{F_2, F_4\}) < \alpha$, remove.
 $OD(\{F_2, F_3, F_4\}) < \alpha$, remove.

Strengths of GOAM Algorithm

Problem Definition
Data Visualization
GOAM Algorithm
Step One - Group Feature Extraction
Step Two - Outlying Degree Scoring
Step Three - Outlying Aspects Identification
Evaluation Results
Conclusion

- **Reduction of Complexity**
 - ◆ Bottom-up search strategy.
 - ◆ Reduce the size of candidate subspaces.
- **Efficiency**
 - ◆ Before: $O(2^d)$
Now: $O(d * n^2)$
